CONFIG

Helping you... Carrying on!

Config Liner for Shipping Agencies is a sophisticated ERP package, which integrates all the processes of the shipping agency business under one central system. It is designed to automate, streamline and run all the functions of both Container Liner and General Cargo agencies: Import & Export Management, Container Tracking, Supply Chain Management (SCM), Customer Relationship Management (CRM), Billing & Financials, Business Process Management (BPM) and Business Intelligence (BI). With more than 100 man-years of development, Config Liner for Shipping Agencies is the most comprehensive and extensive software available for the industry.

Transparency and visibility: The system provides easy access to real-time information at all stages of the execution chain to empower customers – event management control, alerts and status messaging, scheduled reports, data transmission and web access.

Billing and accounting capabilities: A variety of accounting features is available, including automatic invoicing based on tariffs and agreements, and reconciliation with logistics partners, especially agents, airlines and ocean carriers, to reduce time spent on recording and auditing invoices.

Management tools for controlling, monitoring and analyzing operations: Workflow management facilities, profit reports, queries, statistics and KPIs facilitate informed decision-making.

Production of all required documents: These include ocean bill of lading, manifest, attach list, delivery order and more. Documents can be archived digitally via the Document Management system, thus creating a paperless office.

The system features interfaces and structured messaging for ensuring connectivity and exchange of data with all business partners in the supply chain – the principal, customs, port authorities, tally companies, container depots and others. Config Liner for Shipping Agencies can handle multiple ocean carriers and all the relevant electronic messaging.
