

Config E.R.P. (Enterprise Resource Planning)

Technology

Built on ASP.Net Framework / SQL Microsoft technology, can be accessed via the internet as a standard package. In addition to this, a full web services tool is available allowing your customer to access a full track and trace function, user defined query tool, view key events and booking entry as well as to view the status of any shipment. Sophisticated security control module prohibited illegal access to the system. User can define the access control easily.

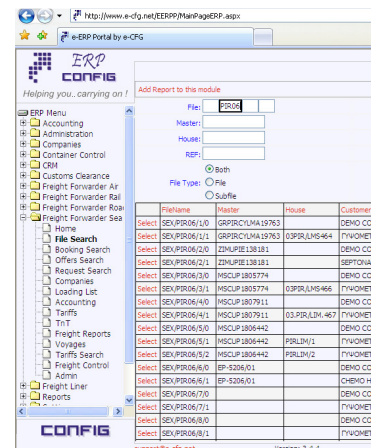

Config ERP is a fully integrated, modular, multi-modal logistics suite covering air, land and sea freight operations and can operate with either single or multi modal operations. The system works around a central database with browser access allowing remote users to connect via WAN, LAN, intranet or internet. The system is scalable and reliable, independent volume tests have had more than 3000 users processing in excess of 15,000 jobs per hour.

Some of Config ERP features:
